Bluetooth Audio

Typical requirements and known-answer test anchors

2.1 Ignition OFF response Page 2

2.2 Reception loss Page 3

2.3 USB interruption Page 4

2.5 Related audio routing Page 5

All requirements, document identities and tickets in this suite are invented. They are used only to validate version changes, references, retrieval and fail-closed behavior. Do not import these fixtures into an enterprise knowledge base.

2.1 Ignition OFF response

The controller shall stop Bluetooth playback within 700 ms after ignition becomes OFF, unless an emergency call is active.

2.2 Reception loss

When reception is lost, Bluetooth audio may be silent, but Bluetooth Audio mode shall remain active. If reception recovers within 3 seconds, playback shall resume automatically.

2.3 USB interruption

If USB insertion pauses Bluetooth playback, playback shall resume only after USB is removed and the user selects Bluetooth Audio again.

2.5 Related audio routing

See specification 990201 section 3.1 for emergency call audio priority.
